

KDS Express answers the needs for compliance with the latest Part L2 building regulations.

We offer metered lighting and power boards utilising Merlin Gerin, Square D, Dorman Smith, ABB, Hager and MEM.

KDS Express offers the advantage that both sections can be assembled using any combination of ways.

This means that all requirements are catered for without being forced to take the standard manufacturers offer with the resulting cost and space implications.

All boards include incoming device, current transformers, meters and meter protection.

Our offer includes for two meter displays for separate readings of lighting & power consumption, with all power and control wiring, fully tested and labelled. Both meters have pulsed outputs wired to terminals for connection to a compatible BMS system.

Brand-specific price lists are available on request detailing the various configurations.
